

# New Treatment for Patients Living with Chronic Migraine

Neurology and Sleep Sciences is offering a new service of BOTOX® treatment for management of patients living with Chronic Migraine.

## The simplified criteria and definition for Chronic Migraine are:

- 15 or more headache days a month
- Headaches last for 4 hours a day or more
- With at least 8 of the headache days associated with migraine

Using these simplified criteria is the easiest way to identify Chronic Migraine patients. We would recommend re-evaluating headache patients in your practice using the Chronic Migraine definition above and keeping it in mind with future patients.

## Services we offer:

- Assist in diagnosing patients you suspect might have Chronic Migraine
- Help optimize your patients' current treatment plan
- Evaluate your patients for BOTOX® (onabotulinumtoxinA) injection therapy

Our practice also has the logistics to specifically handle BOTOX® injections and the related reimbursement and accounting processes.
